PROJECT TITLE: FUREVER CARE

INTRODUCTION

FurEver Care is a responsive pet-care website designed to provide pet owners with useful information and resources in one place. The website offers pet-care guides, product information, veterinary and emergency help, feedback and contact facilities. It also provides separate interfaces for pet owners, veterinarians and animal shelters.

The website focuses on creating a friendly, attractive and easy-to-use experience through colorful visuals, animations, multimedia content and responsive layouts.

PROBLEM DEFINITION

Pet owners often need to visit different sources for pet-care information, products, veterinary help and adoption-related services. Finding reliable information in one place can be difficult and time-consuming. FurEver Care addresses this problem by providing a centralized platform where users can easily access important pet-care resources and services.

OBJECTIVES

The main objectives of FurEver Care are:

- To provide useful pet-care information in one place.
- To allow users to create and view pet profiles.
- To provide feeding, grooming, health and training guidance.
- To display pet products with categories, search and filtering.
- To provide veterinary and emergency information.
- To connect users with animal shelters and adoption resources.
- To provide an attractive, responsive and user-friendly interface.

SCOPE OF THE PROJECT

FurEver Care covers three main user categories: Pet Owners, Veterinarians and Animal Shelters. The Pet Owner portal provides pet profiles, pet-care information, products, veterinary help, feedback and contact facilities. The Veterinarian portal provides veterinarian information, appointments and sample medical records, while the Animal Shelter portal provides adoptable pets, filters, success stories, events and shelter contact information.

MAIN FEATURES

Pet Owner

- Pet Profile
- Personalized user information
- Pet Care
- Feeding Guide
- Grooming
- Health Tips
- Training Tips
- Pet Products
- Search, filtering and categories
- Vet & Emergency Help
- Feedback
- About Us
- Contact Us

Veterinarian

- Veterinarian Profile
- Specialization and contact information
- Appointment time slots
- Sample pet medical histories

Animal Shelter

- Adoptable Pets Gallery
- Pet filtering
- Adoption Success Stories
- Upcoming Events
- Shelter Contact Information
- Google Map

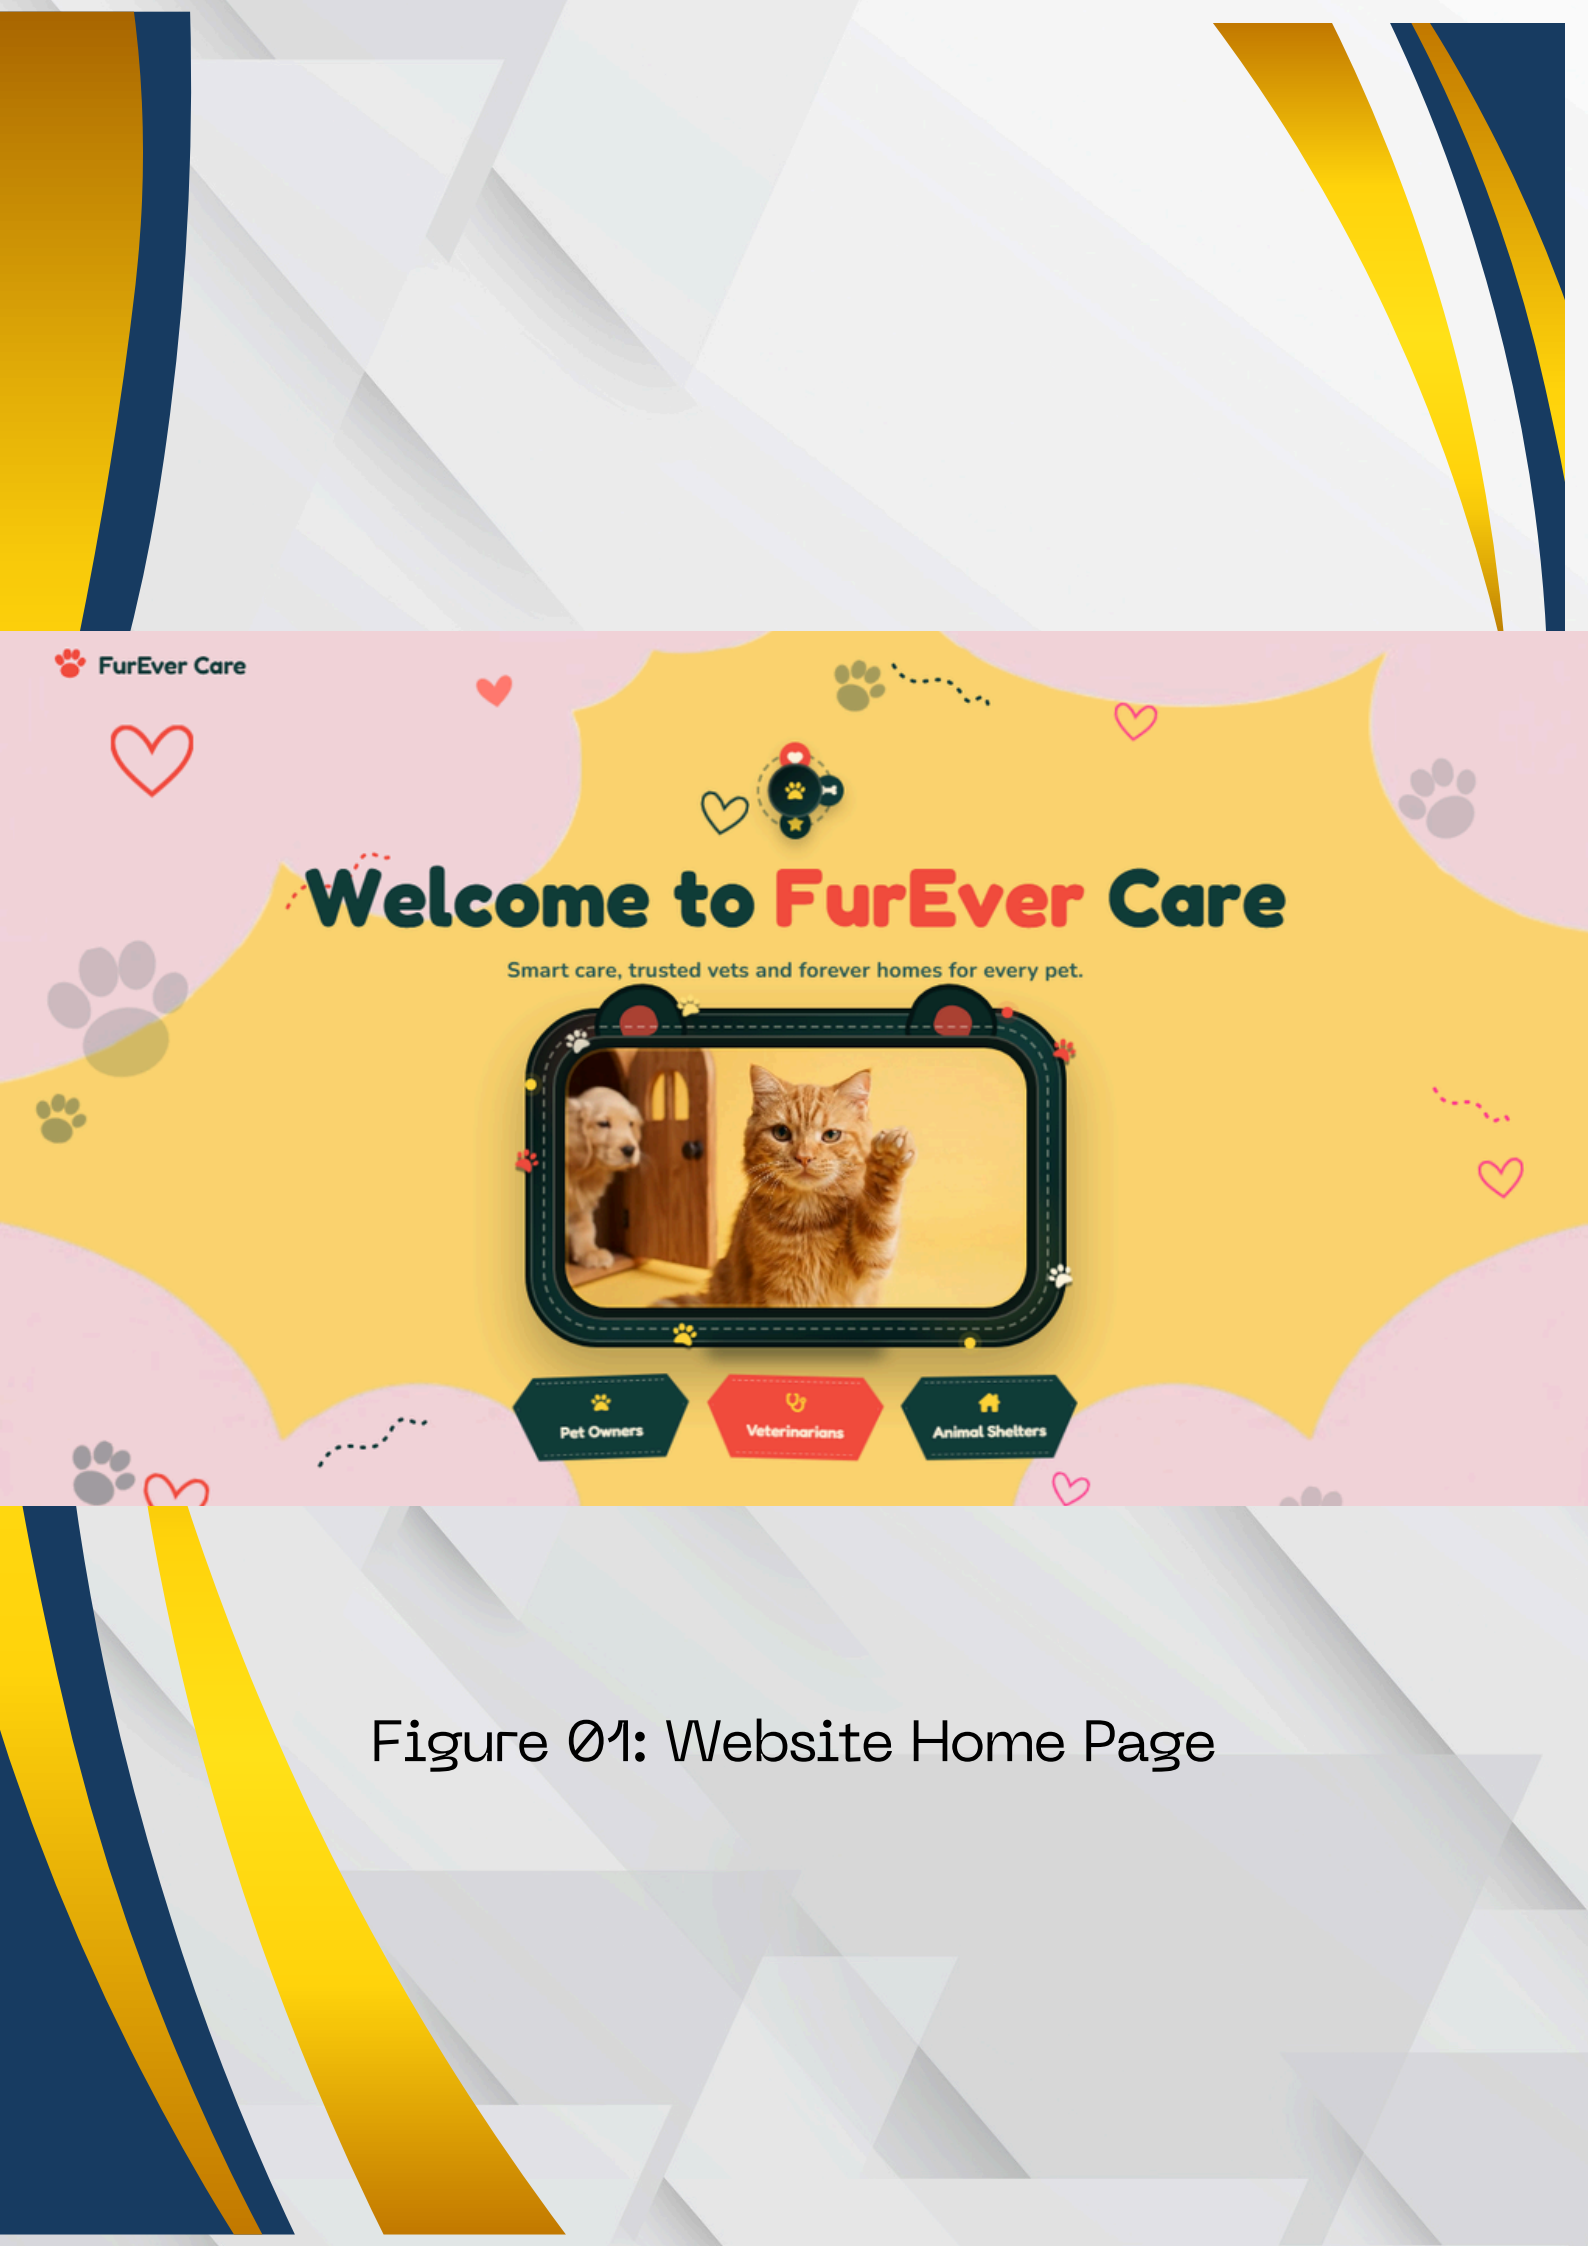

TECHNOLOGIES USED

- HTML5 — Website structure
- CSS3 — Styling, layouts and responsive design
- JavaScript — Interactivity and functionality
- JSON — Product data storage and retrieval
- Bootstrap — UI components, if used
- Font Awesome / Icons — Interface icons
- Lottie Animations — Animated visual elements
- VS Code — Development environment

UI/UX & DESIGN

FurEver Care uses a colorful and playful visual style inspired by pets and animal care. Different sections use bright and soft colors, rounded elements, illustrations, animations and animal-themed visuals.

The interface was designed to be easy to understand and navigate. Responsive layouts were used so that the website can adapt to different screen sizes. Animations and multimedia elements were added to make the website more interactive and engaging.

TESTING

The website was tested to verify that its major features work correctly.

Test Case	Expected Result	Status
Role Selection	Correct dashboard opens	Pass
Pet Profile	Pet information is displayed	Pass
Product Search	Relevant products appear	Pass
Product Filter	Selected category is displayed	Pass
Navigation	Correct page opens	Pass
Feedback Form	Form validates/submits	Pass
Contact Form	Form validates/submits	Pass
Responsive Layout	Website adapts to screen size	Pass
Videos/Audio	Media loads and plays correctly	Pass
Buttons/Links	Required actions work correctly	Pass

Installation

- Extract the FurEver Care project folder.
- Open the project in Visual Studio Code.
- Ensure all folders and assets remain in their original locations.
- Run the website using a local server such as Live Server.
- Open the provided index.html in the browser.

Usage

Users first select their required role and then access the relevant dashboard. Users can navigate through the available features using the navigation menu and interact with forms, products, multimedia content and other website components.

PROJECT CONSTRAINTS

FurEver Care is a front-end based website and does not use a server-side database. Product and other predefined information is retrieved from local JSON/TXT files. Information is displayed to the user through the website interface rather than being stored on a server.

CONCLUSION

FurEver Care provides a centralized and user-friendly platform for accessing pet-care information, products, veterinary assistance and shelter resources. The project combines responsive design, interactive features, multimedia content and attractive visual elements to create an engaging pet-care experience.

The website fulfills the major functional and design requirements specified in the SRS while also adding creative visual and interactive elements.

FUTURE ENHANCEMENTS

In the future, FurEver Care can be enhanced by adding:

- Real user authentication
- Online appointment booking
- Online product purchasing
- Database integration
- Real-time veterinary consultation
- Online adoption applications
- Personalized pet health reminders
